Company overview

UAV HUB SYSTEMS LIMITED is a Nigerian technology and innovation company that develops, deploys, and promotes emerging technologies to solve real-world problems.

Our work brings together Unmanned Aerial Vehicle (UAV) technology, artificial intelligence and machine learning, AgriTech, and STEM education to create practical technology solutions and equip the next generation with relevant technical skills.

We combine technology, practical training, and innovation to help individuals, schools, institutions, businesses, and organisations understand and harness the opportunities created by emerging technologies.

Vision

To become a leading African technology and innovation hub, developing intelligent solutions and equipping a generation with the skills to create the future.

Mission

To make emerging technologies more accessible, practical, and impactful through innovative solutions, professional services, hands-on training, and technology education.

Core service

UAV & drone technology

End-to-end drone capability — from build, to flight, to the data it captures.

— Drone building and customisation

— UAV configuration and setup

— Drone flying and aerial services

— Drone pilot training

— UAV demonstrations

— Drone repair and maintenance

— Drone inspection and troubleshooting

— Aerial photography and videography

— Aerial data collection

— Mapping and surveying applications

— Drone technology consultancy

Core service

AI & machine learning engineering

Applied artificial intelligence, engineered for real operating environments — not just proofs of concept.

- Machine learning model development
- Artificial intelligence application development
- Computer vision solutions
- Image classification
- Object detection and recognition
- Predictive analytics

- Data analysis
- Data preprocessing and feature engineering
- Model evaluation and optimisation
- AI-powered automation
- Intelligent dashboards and decision-support systems
- AI/ML prototypes and proof-of-concept solutions
- Custom AI solutions for businesses and institutions

Core service

AgriTech & smart agriculture

We apply drone technology, artificial intelligence, data, and remote sensing to improve agricultural decision-making and productivity.

- Drone-assisted agricultural monitoring
- Aerial crop observation
- Agricultural data collection
- Crop monitoring solutions

- AI-assisted image analysis
- Remote sensing applications
- Agricultural technology consulting
- Smart agriculture solutions

Our goal is to help bridge the gap between agriculture and emerging technology.

Core service

STEM & technology education

We introduce students and young people to practical technologies that prepare them for the future, through hands-on learning, experimentation, problem-solving, and innovation.

Training areas

— Drone technology

— UAV fundamentals

— Drone building and customisation

— Drone flight principles

— UAV safety

— Artificial intelligence fundamentals

— Machine learning fundamentals

— Computer vision

— Technology innovation

— Practical STEM projects

School & institutional programmes

We provide structured technology programmes for primary schools, secondary schools, tertiary institutions, technical schools, educational organisations, youth development programmes, and innovation programmes.

Programmes are delivered through workshops, demonstrations, short courses, and structured practical training.

Core service

Technology consulting & innovation

We help organisations explore how emerging technologies can be applied to their operations, projects, and strategic objectives.

— Technology feasibility assessment

— UAV technology consultation

— AI/ML solution consultation

— Technology project design

— Proof-of-concept development

— Digital innovation

— Emerging technology strategy

— STEM programme design

We work with clients to identify the problem first, evaluate the available technology, and develop a practical path toward implementation.

Sectors we serve

Schools & educational institutions

STEM programmes, drone education, AI/ML education, and practical technology workshops.

Businesses

AI/ML solutions, automation, aerial services, technology consulting, and data-driven solutions.

Agricultural organisations

Drone monitoring, remote sensing, and technology-assisted agricultural applications.

Government & public institutions

Technology education, UAV applications, data solutions, and innovation programmes.

Individuals & professionals

Drone training, technology education, and practical skills development.

Organisations & NGOs

Technology-based youth empowerment, STEM initiatives, and innovation programmes.

How we work

Our technology approach

A consistent five-stage process, from first understanding the problem to supporting what we deliver.

Our philosophy

Don't just use technology. Understand it.
Build with it. Solve problems with it.

Why choose us

Why UAV HUB Systems?

1

Practical technology

We focus on applying technology to real-world problems.

2

Emerging technology

Our services are built around rapidly developing technologies, including UAVs, artificial intelligence, machine learning, and smart agriculture.

3

Hands-on learning

Our educational programmes emphasise practical experience rather than theory alone.

4

Innovation mindset

We encourage experimentation, creativity, and problem-solving.

5

African context

We develop and apply technology with the needs and realities of African communities and organisations in mind.

Our commitment

Technology is more than equipment, software, or algorithms. It is a tool for solving problems, creating opportunities, and developing people.

At UAV HUB SYSTEMS LIMITED, we are committed to making emerging technology practical, accessible, and impactful, while equipping young people and organisations with the knowledge to participate in the future of technology.

Experience & capability

Building our portfolio, one deployment at a time

UAV HUB SYSTEMS LIMITED is building its portfolio through practical technology demonstrations, drone education initiatives, technology training, and solution development.

Our capability is centred on combining technical knowledge with practical delivery. We are positioned to support institutions and organisations seeking hands-on exposure to UAV technology, emerging AI/ML applications, STEM education, and technology innovation. As our portfolio expands, we continue to document projects, demonstrations, training programmes, and client engagements as evidence of our growing capability.
